

AUTOCONT

COMPANY PROFILE

AC people

About 750 employees form the AUTOCONT CZ team. Most of them have years of experience in their field. We also employ a number of young people and students, who enrich the company with their enthusiasm and an unbiased look at today's IT. We have 420 certified specialists with 1,280 certification titles related to our key partner technologies.

AC structure

AUTOCONT adapts its internal organization to the needs and possibilities of its customers. It applies different approach to dealing with complex enterprise projects at large customers on one hand, and smaller projects at medium-sized commercial companies on the other hand. Internally, AUTOCONT is divided into 3 separate business units:

AUTOCONT EBS

is focused on implementation of large enterprise projects at large customers. Its internal structure consists of several expert divisions:

- ESA - Enterprise Solutions and Applications
- ECM - Enterprise Content Management
- CIT - Corporate IT Infrastructure
- ITSM - Information Technologies Service Management

AUTOCONT PAS

is focused on deployment and support of Microsoft Dynamics enterprise information systems and personnel and payroll systems. Solutions for working with data and Business Intelligence are also a very important area. Many years of experience of AUTOCONT's specialists have led to the creation of a wide range of business solutions that have enhanced AUTOCONT's position as a company leader in this area in the Czech Republic.

AUTOCONT MM

This unit focuses mainly on projects and services for medium-sized and small customers. It primarily offers IT infrastructure, business applications, business process support and user care, and IT security. Where applicable, AUTOCONT MM is able to assume full responsibility for customer's entire IT operation. The owners and the management of our customers are ensured reliable operation of their IT at a reasonable cost. For IT managers, AUTOCONT MM can serve as an advisor, consultant, and technical specialist.

AC coverage

AUTOCONT activities are spread across all regional and some other towns of the Czech Republic and Slovakia, which is a great advantage for many customers.

IT INFRASTRUCTURE

The scope of IT infrastructure is vast. It starts with cables buried underground and backup diesel generators to supply electric current in case of an outage, and continues with construction of economically efficient data centres with the possibility of using cloud computing technologies, designs of high-performance data storage areas and network access, application and desktop virtualization, database infrastructure implementation, including directory services, email, security and monitoring, and IT management. Finally, it ends with warranty and post-warranty service and subsequent services for the support and operation of IT. Not every customer needs and uses everything. It depends on the size of the company and its focus. However, the important thing is that whatever the company needs in this area, AUTOCONT can take care of it.

INTEGRATION AND CONSULTANCY

Nowadays, most businesses, as well as state or public administration customers, are not interested in individual information technologies or systems. On the contrary, they expect procurement of solutions to support their business or performance of the state or public administration. Implementing these solutions usually means having to build or connect more information systems, technologies and suppliers, linking them together into an operating unit, which the system integrator will be responsible for. AUTOCONT has the ambition, skills and experience to meet this role at its customers and other suppliers. AUTOCONT's offer therefore includes consultancy in the field of ICT security and management, consultancy on ICT strategy and development, and overall business and process consultancy.

OUTSOURCING

AUTOCONT offers outsourcing services ranging from overseeing the operation of terminal equipment, and server management and network management outsourcing, to complex IT infrastructure and customer applications outsourcing, including possible assumption of property and personnel. Operated services are managed and carried out in accordance with the ISO/IEC 20 000 standards, even in 24/7 mode. A specific form of outsourcing is the concept of „We are Your IT“, designed for small and medium-sized commercial companies, who are willing and able to pass on the IT operation of their business onto AUTOCONT. Besides the outsourcing of specific technologies and services, AUTOCONT has its key competence in integrating customer's applications and participating in their IT development planning.

BUSINESS APPLICATIONS AND SOLUTIONS

AUTOCONT has a very broad portfolio of applications. It includes Enterprise Resource Planning (ERP), Personnel and Payroll Systems (PPS), Enterprise Project Management (EPM), and Customer Relationship Management (CRM) systems. Everything comes with data warehouses, Business Intelligence, digitization, document management and administration, web and portal solutions, and mobile applications. The practical experience obtained from many projects has allowed us to create a broad spectrum of industry solutions. The goal of the customer is always the same – to achieve greater efficiency, cost savings and higher revenue through process automation. The task of AUTOCONT is to develop an optimal way and means for doing this, and together with the customer bring the proposed solutions to life.

CLOUD

For a rapidly growing cloud area, AUTOCONT offers solutions and services based on the use of public, private, or hybrid cloud. Cloud services are provided from its own data centres in the Czech Republic or, in the case of Microsoft services, from data centres located abroad. AUTOCONT provides consultancy on cloud usage, it designs and implements migration scenarios and, of course, subsequently provides cloud operation. In addition, it offers infrastructure for rent and a wide range of cloud applications.

SOFTWARE DEVELOPMENT

AUTOCONT has developed and deployed a number of its own products, such as an identity management system, knowledge testing system, timely intervention system, data box management system, document record management system, and many other. In addition, based on the requirements of its customers, AUTOCONT develops software for data warehouses, production control systems, information portals, form systems, as well as mobile applications. Special attention is addressed to industrial applications within Industry 4.0 standards. Customers get high value-added solutions that cannot be obtained through buying standard products on the market. AUTOCONT can also carry out complex integration projects ensuring proper communication of individual applications, higher security and a more manageable environment.

AC helps

As a successful company, we spend hundreds of thousands of CZK every year to support non-profit organizations and projects. Our goal is direct, long-term, and unpretentious assistance. We cooperate with entities in individual regions, as well as foundations which are national in scope.
